Globally, approximately 80% of all leather is tanned using the chrome tanning method and 10 - 12% using the vegetable tanning process. The type of tanning method can be identified by the colour of the leather (before colouring and before finishing). If vegetable tanned, the leather is brown. If tanned with fats or oils, it is yellowish.

Tannin in the leather tanning industry | Tannins.org

Tanning is the process of treating skins and hides of animals to produce leather. A tannery is the place where the skins are processed.. Tanning hide into leather involves a process which permanently alters the protein structure of skin, making it more durable

and less susceptible to decomposition, and also possibly coloring it.. Before tanning, the skins are dehaired, degreased, desalted and ...
