Introduce your earth science students to stars, star systems, and galaxies with the included reading worksheets and doodle sketch note graphic organizers. Students will read to learn about the characteristics, life cycle, and types of stars as well as the different types of galaxies. Digital activit

Earth and Space Science - Galaxies | PBS LearningMedia

Galaxies and Stars. There are billions of galaxies in the Universe, each one is a system of billions of stars held together by gravity. Galaxies can be spiral (shaped like pinwheels), elliptical (oval or round), or irregular (no definite shape). Our solar system (including the Sun and the Earth) is located in the Milky Way Galaxy, which is a spiral galaxy.

The ultraviolet glow around some galaxies may come from ...

the final stage in the life cycle of some massive stars; the remnant of a star that is so dense that not even light can escape its gravity field: galaxy: a massive grouping stars, gas, and dust in space, held together by gravity; can be elliptical, spiral, or irregular: big bang theory

Stars And Galaxies Worksheets & Teaching Resources | TpT

Stars form immense groups called galaxies. A galaxy can contain many millions of stars, held together by the force of gravity. Our Sun is in a spiral galaxy called the Milky Way. The Sun is about...

Regents Earth Science Resources: Galaxies and Stars

Stars, galaxies and the Universe, Earth Science, Chapter ... Stars form immense groups called galaxies. A galaxy can contain many millions of stars, held together by the force of gravity.

earth science stars galaxies Flashcards and Study Sets ...

Stars are classified by color and temperature: O (blue), B (bluish white), A (white), F (yellowish white), G (yellow), K (orange), and M (red), from hottest to coolest. Stars form from nebulae. Gravity causes stars to collapse until nuclear fusion begins. Stars spend most of their lives on the main sequence, fusing hydrogen into helium.

Earth Science Stars And Galaxies

M83, a barred spiral galaxy located 15 million light-years from Earth in the constellation Hydra, emits ultraviolet light well beyond its visible disk of stars (seen here), in places where the hot ...
