Comparative genomics is a field of biological research in which the genomic features of different organisms are compared. The genomic features may include the DNA sequence, genes, gene order, regulatory sequences, and other genomic structural landmarks. In this branch of genomics, whole or large parts of genomes resulting from genome projects are compared to study basic biological similarities

Comparative genomics can be simply defined as the comparison of biological information derived from whole-genome sequences. Comparative genomics therefore began in 1995, when the first two whole organism genomes (for the bacteria *Haemophilus influenzae* RD and *Mycoplasma genitalium* G37) were published (Figure 1). Very soon thereafter came bioinformatics tools to compare the genome sequences ...
